

Independent Book Project: Ender's Game

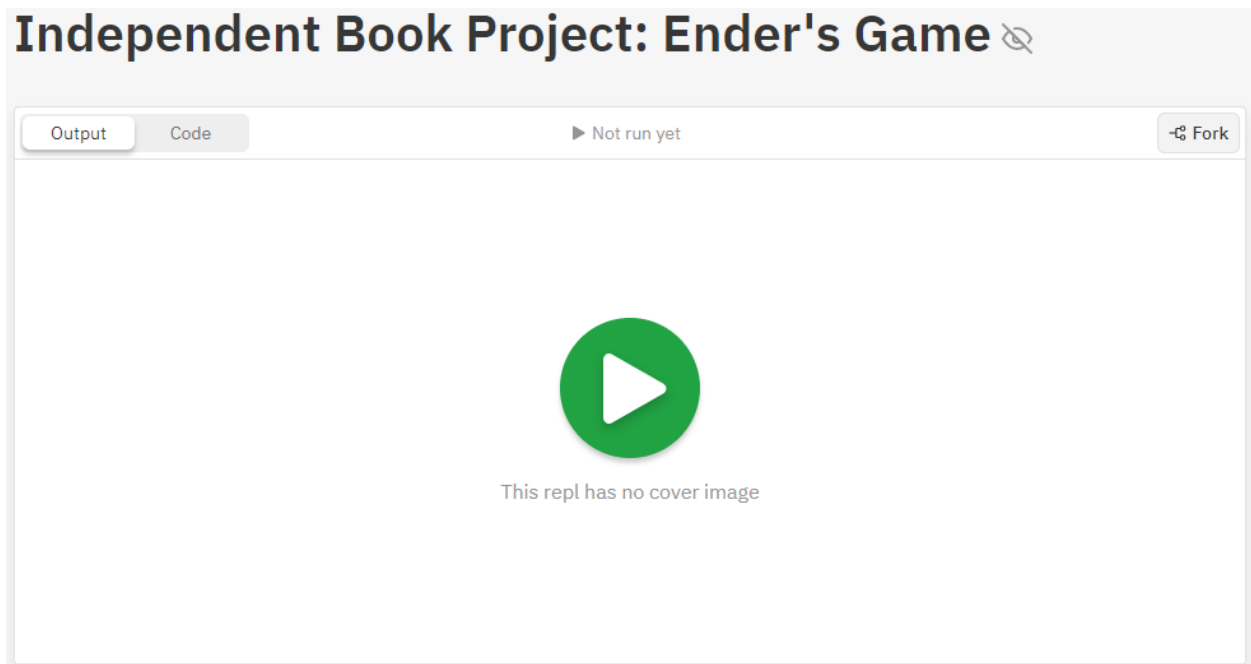

Code written by Jeremy Hsieh

How to run:

(This document is best viewed digitally on Schoology)

First, go to <https://replit.com/@JeremyHsieh/Independent-Book-Project-Enders-Game>.

You should see this:

From here, simply click on the big green button. The text may take a bit to load, but it should eventually.

How to play:

The game works around multiple-choice inputs to drive the story.

```
Welcome to Ender's Game! To respond to prompts, type your input after the ">". Try one now, type "start"!
>
```

In this instance, simply click on the console (black text box) and type "start". Other prompts will give you letters to input in multiple-choice fashion. For example, here:

```
Do you:
A: Accept the offer
B: Decline the offer
(Type the letter you want to answer with)
> |
```

It's case-insensitive, so don't worry about capitalization. Each option will trigger different text to print, with some looping back to the question, and others ending your game, such as this one:

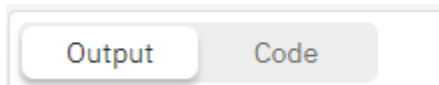

```
Game over man, game over! Hit run to play again.  
repl process died unexpectedly:  
➤
```

When this happens, just hit “Run” at the top.

Other things:

You can view the actual JavaScript code by clicking on the Code tab, next to Output.

(Mr. Ezell might be able to explain the code. ;-))

Short on time? Here are the “correct” answers for the full, actual ending of the book:

A
B
A
C
A
